To whom it may concern:

I have worked with Libra-Tech and Penny Gromatzky for the past year remodeling and reorganizing my Library.

Penny did an incredible job of working with us creating our new space. Our Library is wonderful to look at, efficient in its usage, and inviting to all that enter!!!

Libra-Tech reviewed our curriculum needs and helped us create a space to fully address each and every aspect of them....

Examples:

- Libra-Tech designed our Library to be capable of working with all of our various levels of technology for individuals to groups up 140.
- We have a Promethean Table that was placed with connections to fully utilize up to its maximum of 6 students.
- Our Movable Promethean Board can be placed to work with small groups and large groups depending on how we arrange our Flexible shelves and dividers.
- Our Online reference section that Libra-Tech designed connects individuals and groups to the Internet and allows all devices to be fully housed and charged.
- We can have whole classes, individuals and small groups working simultaneously and independently on their projects.
- The space was designed to work thru the entire year of needs that are undertaken in the library. From weekly Chess Club, annual Book fairs, testing in the spring and frequent faculty meetings and trainings, our space can encompass every need that we present it. The wireless hub and placement of focused lighting and electrical connections allows us the flexibility to pursue whatever comes our way!!!

Libra-Tech worked creatively with our budget to meet our many needs. They were able to help us create a library that functions quite efficiently.

Our furniture is quite durable, functional and effective to use. While our library was created for K-4th grade, our selections were guided to have the capability to be utilized comfortably with parents and teachers also.

The flexibility of our pieces will enable this Library to grow and adapt as our needs change and grow ...

This was a wonderful experience and I continue to appreciate the guidance shared with us from Libra-Tech.

Janet Peters
